

HEALTHAI: Intelligent Healthcare Assistant using IBM Granite

- **INTRODUCTION**

- **Project Overview**

HEALTHAI: Intelligent Healthcare Assistant using IBM Granite is a generative AI-powered application designed to provide smart healthcare support to patients through an interactive and intuitive interface. The system leverages IBM's Granite language model to facilitate health-related conversations, predict diseases based on symptoms, suggest possible treatment plans, and display useful health analytics. Developed using Python and Streamlit, the application aims to simplify patient engagement and support early diagnosis and treatment planning through AI.

- **Purpose**

The primary purpose of this project is to harness the power of Generative AI for delivering accessible, reliable, and intelligent healthcare support. HEALTHAI serves as a virtual health assistant that helps users:

- Get instant responses to general health queries.
- Predict diseases based on symptoms using AI.
- Receive relevant treatment suggestions.
- View simple, clear analytics on health trends.

This project also demonstrates the practical application of IBM Granite models in solving realworld healthcare problems, fulfilling academic and internship goals under the IBM Generative AI program.

IDEATION PHASE

Project Name: Health AI: Intelligent Healthcare Assistant Using IBM Granite.

Marks: 4 Marks

Customer Problem Statement Template

Create a problem statement to understand your customer's point & view. The Customer Problem Statement helps you focus on what mat-ters to create experiences people will love.

A well-articulated customer problem statement allows your team and your users to find the ideal solution your business faces. Throughout the process, you'll also be able to empathize with your customer so you better understand your

Template: <https://miro.com/templates/customerproblem-statement/>

Example:

Problem Statement (PS)	(i am)	I'm trying to	But	Which makes me feel
PS-1	a patient	manage my health effectively	I face difficulty	frustrated and anxious about my well-being
I'm		manage my health effectively	I face continued and lacks processing and medication' the current healthcare system is fragmented and lacks proactive support	

• Empathy Map Canvas

Marks: 2 Marks

Empathy Map Canvas

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviors and attitudes.

It is useful to helping teams understand their users.

Creating an effective solution requires understanding the person who is experiencing it. Exe participants consider how participants consider user needs, goals, and challenges

Example:

Brainstorm & Idea Prioritization in Health AI

Brainstorming in Health AI promotes free, creative thinking to generate innovative solutions for healthcare challenges using artificial intelligence. To collect a wide range of ideas from diverse team members, then prioritize based on impact, feasibility, and urgency. Encourage maximum idea generation, regardless of practicality at first.

Cross-functional team members (AI developers, clinicians, analysts) co-create ideas. Ideal for distributed teams using tools like Miro or Mural.AI-driven symptom checking, disease prediction,

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Health AI & idea prioritization

Use this template in your own brainstorming sessions so your team can explore applications of AI in healthcare.

10 minutes to prepare
1 hour to collaborate
3-8 people recommended

Health AI

Solution Requirement

Solution Requirements (Functional & Non-functional)

Date	27 June 2025
Team ID	LTVIP2025TMID59346

Project Name	HealthAI-Intelligent Healthcare Assistant Using IBM Granite
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FRNo.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Registration	Registration through Form Registration Registration through Gmail Registration through LinkedIn
FR-2	User Confirmation	Confirmation via Email Confirmation Confirmation via OTP
FR-3	Disease Prediction	Symptom-based prediction Model scoring using IBM Granite AI
FR-4	Health Assistant Chat	Natural language query handling Context-aware health response

FR-5	Treatment Plan Recommendation	Display treatments based on disease Explain predicted outcome
FR-6	Health Analytics	View past predictions Graphs for health trends

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

Product Backlog, Sprint Schedule, and Estimation (4 Marks)

Functional Requirement	Sprint	Story ID	User Story / Task	Story Points	Priority
Registration	Sprint 1	US#4	As a user, I can register for the application (US3)	5	High
		US#2	As a user, oral responses can be analyzed using speech-to-text (US2)	8	High
Login	Sprint 1	US#3	As a user, health data can be input into system	7	High
		US#1	As a user, I can log in to the application	2	High
Dashboard	Sprint 2	US#1	As a user, I can view health data visualizations on the central (US5) dashboard	2	Medium

Project Name	HealthAI-Intelligent Healthcare Assistant Using IBM Granite
Maximum Marks	2 Marks

Data Flow Diagrams:

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

Example: DFD Level 0 (Industry Standard)

Health AI

User Type	Functional Requirement	User Story /Task	Acceptance criteria	Priority	Rele
 Customer (Mobile user)	Registration	As a user, I can register by providing an email and password.	Email and password can be used to log in	High	Spri 1
	USS1	As a user, I will receive confirmation email	Confirmation email received	High	Spri 1
 Tester	USS2	As a user, I can enable systemwide speech-t-o-text	Speech-to-text is active throughout the app	Low	Spri 2
 Administrator	USS3	As a tester, I can analyze speech responses	Speech responses are analyzed correctly	Medium	Spri 1
	USS4	As an admin, I can view health data visualizations		Sprint 1	Spri 1
 Administrator	US4	As a tester, I can analyze speech responses	Speech responses are analyzed correctly	Medium	Spri 1
 Visualizaation	US5	As a tester, I can analyze speech responses	Health data visualizations are available	High	Spri 1

Technical Architecture – HealthAI

HealthAI’s technical architecture is designed to provide intelligent, personalized, and accessible healthcare assistance using IBM’s AI capabilities. The architecture bridges the gap between healthcare

user needs and AI-driven digital solutions by clearly defining modules, workflows, and technology integrations.

It follows principles of modular design, AI integration, secure backend logic, and interactive frontend experiences.

• PROJECT DESIGN

• Problem Solution Fit

Problem – Solution Fit Template :

Date	27 June 2025
Team ID	LTVIP2025TMID59346
Project Name	HealthAI-Intelligent Healthcare Assistant Using IBM Granite
Maximum Marks	2 Marks

Problem – Solution Fit Template : HealthAI solves a frequent and urgent problem: lack of easy access to valid healthcare information and insights. It taps into the existing behavior of users searching for medical information online and replaces it with a credible, AI-powered platform.

Purpose :

- ☑ Solve complex health-related problems using intelligent and accessible AI assistance
- ☑ Increase solution adoption by reflecting how users already seek medical information online
- ☑ Improve communication using conversational chat and visual analytics
- ☑ Build user trust with consistent, evidence-based responses

Health AI Problem-Solution-Fit Template

CS CUSTOMER SEGMENTS	CUSTOMER SEGMENTS (CS) Who are your target users? e.g. elderly individuals with chronic conditions, rural patients with limited access to healthcare, or caregivers of Alzheimer's patients.	JOBS-TO-BE-DONE / PROBLEMS (J&P) What specific health challenges do they face? e.g. medication adherence, early diagnosis, appointment management, lifestyle monitoring.	
	TRIGGERS (TR) What drives users to seek a solution? e.g. worsening symptoms, hospital readmission, advice from a physician or caretaker.	EMOTIONS: BEFORE / AFTER (EM) How do they feel before the solution vs. after? e.g. digital literacy, cost, lack of smartphones, unreliable internet.	
CC CUSTOMER CONSTRAINTS	CUSTOMER CONSTRAINTS (CC) What obstacles might prevent them from accessing help? e.g. digital literacy, cost, lack of smartphones, unreliable internet.	BEHAVIOUR (BE) What do users do to manage their health problems? e.g. rely on memory for meds, ask family members for help.	CHANNELS OF BEHAVIOUR (CH) 8.1 Online: • Health forums, • YouTube health advice, telemedicine apps. 8.2 Offline: • primary care visits, • local health camps, support groups.
	PROBLEM ROOT CAUSE (RC) What's the deeper reason this problem exists? e.g. lack of awareness, systemic inefficiencies.	YOUR SOLUTION (SL) Describe your Health AI product or concept.

✓ **Solution Architecture – HealthAI**

Solution architecture in HealthAI serves as the bridge between real-world healthcare challenges and advanced AI-driven technology. It outlines how HealthAI is built to deliver accurate, personalized, and responsive medical support.

🎯 **Goals of HealthAI’s Solution Architecture:**

- Identify the most effective AI-driven technology to solve the problem of inaccessible or unreliable healthcare information.
- Design the complete structure — from user input (like symptoms or questions) to backend AI processing using IBM Granite and secure API handling.
- Define key features and development phases, including modules like:
 - Patient Chat o Disease Prediction o Treatment Plan Generation o Health Analytics

□ **Key Characteristics of the HealthAI Architecture:**

Modular and Scalable Design: Each core functionality is independently built using Python and Streamlit.

AI Integration: IBM Granite (13B Instruct v2) is used to process all medical queries and generate accurate, natural-language responses.

User Interface: Streamlit provides an intuitive frontend with form-based inputs, chatbot interfaces, and dynamic visualizations using Plotly.

Data Flow: User inputs are sent to the AI model via a central shared function (shared_model.py), processed securely, and returned in structured output.

Security: Environment variables (.env) are used for API key management to protect sensitive credentials.

Figure 1: Architecture and data flow of the health AI system

- RESULTS

- Output Screenshots

The screenshot displays the HealthAI web application interface. The browser's address bar shows the URL 'healthcareai-7777.streamlitapp'. The application has a dark theme and features a top navigation bar with a 'Share' button and icons for settings, search, and a menu. The main content area is divided into two primary sections: 'Patient Profile' on the left and 'AI-Powered Healthcare Assistant' on the right. The 'Patient Profile' section includes input fields for 'Name', 'Age' (set to 30), 'Gender' (set to Male), 'Medical History', and 'Current Medications'. The 'AI-Powered Healthcare Assistant' section has a text input field where the user has entered 'i am feeling ill'. Below this input is a blue button labeled 'Know what is the problem'. The assistant's response is displayed in a green box, providing a structured analysis: '1. Assess the severity of symptoms:' followed by three diagnostic questions, and '2. Home remedies for mild symptoms:' followed by advice to stay hydrated and rest. A 'Manage app' button is visible in the bottom right corner of the interface.

• ADVANTAGES & DISADVANTAGES

Advantages:

- ✓ 24/7 Accessibility: Users can access healthcare assistance anytime without waiting for a doctor.
- ✓ AI-Powered Responses: Quick and intelligent answers using IBM Granite enhance user experience.
- ✓ Early Disease Prediction: Helps in identifying potential health issues at an early stage.
- ✓ Modular System: Divided into four independent modules for better organization and usability.
- ✓ User-Friendly Interface: Built using Streamlit, it provides a simple and intuitive experience.
- ✓ Cost-Effective: Reduces the need for continuous human supervision in basic healthcare queries.

Disadvantages:

- ✗ Not a Replacement for Doctors: Cannot replace actual medical consultation or diagnosis.
- ✗ Depends on Internet Connection: Requires stable internet to function effectively.
- ✗ Limited to Pretrained Knowledge: IBM Granite model may not always be updated with the latest medical information.

- ✕ Security & Privacy: Requires strict handling of user data for ethical and legal compliance.

- **CONCLUSION**

The HEALTHAI project demonstrates how generative AI, specifically IBM Granite, can be effectively integrated into healthcare applications. By providing intelligent responses to user queries, disease prediction, treatment suggestions, and health analytics, this system can assist users in managing their health proactively. Though it is not a substitute for professional medical advice, it acts as a supportive tool that can bridge the gap between users and healthcare information in real time.

- **FUTURE SCOPE**

- 📄 Integration with Real Medical Records: In future, the system can be connected to Electronic Health Records (EHR) for more personalized responses.
- 📱 Mobile App Development: A dedicated mobile version can improve accessibility on smartphones.
- 🔄 More Advanced AI Models: Upgrading to future IBM Granite versions or fine-tuning with medical datasets for better accuracy.
- 🌐 Multi-Language Support: Expanding to regional languages can make it more inclusive.
- 🛡️ Enhanced Security Measures: Implementing data encryption and secure login to protect user privacy.
- 🗣️👨⚕️ Doctor Integration: Providing live chat features with real doctors or teleconsultation options.
